

Version Control

How to use Github

Hideo Daikoku May 22nd 2020

Hideo Daikoku

What is Git?

Git is a version control software to keep track of changes in code

Create a repository on
GitHub

Clone a repo to your local system

```
git clone http://github.com/comp-music-lab/git-tutorial
```

Make Changes

git add .

```
git commit -m "Update Readme"
```

`git push -u origin master`

Note: You may need to login to GitHub via terminal, or add an SSH key to the repository

Cheatsheet

- `git clone <repository link> <you can also set a custom name>`
- `cd <repository name or custom name>`
- `git add .`
- `git commit -m "Add relevant commit message here"`
- `git push -u origin master`
